W. J. G. B. 1999. *Journal of the Royal Society of Medicine* 92: 101-102.

1. *Phylogenetic relationships*—Phylogenetic relationships among the 12 species were determined using the maximum parsimony method. The analysis was performed using the program PAUP 4.0 (Nelson and Platnick 1991). The analysis was based on 10 morphological characters (Table 1) that were coded as binary or multistate characters. The analysis was performed using the following settings: heuristic search, 1000 random starting trees, 1000 iterations, and 1000 iterations of tree pruning. Figure 1 is a line graph showing the percentage of respondents who believe that the U.S. should take action to reduce global warming, broken down by age group (18-29, 30-49, 50-69, 70+) and education level (High School, College, Graduate). The Y-axis represents the percentage of respondents, ranging from 0 to 100. The X-axis represents the percentage of respondents who believe the U.S. should take action. The legend indicates that the solid line represents 'U.S. should take action' and the dashed line represents 'U.S. should not take action'. The graph shows that the percentage of respondents who believe the U.S. should take action increases with age and education level.
